

Team Biography

ERAU Roboboat Team

The Robotics Association at Embry-Riddle is once again looking forward to competing in our home town. Previously two-time Roboboat winners, we're anticipating the competition and the fun it will bring to our students, as well as the local robotics community.

The past year has been a flurry of productivity, as the team has constructed an entirely new vehicle for the first time since 2014. This new platform is outfitted with the best sensing capabilities for a surface vehicle of this size. The new vehicle has been a passion-project for many of our members, and they're excited to see it hit the water alongside our competitors this June.
