

AUVCaStateLA Bio

The goal of the AUVCaStateLA team is to design, build, and test autonomous underwater vehicles to compete in the annual AUVSI RoboSub Competition. Our team is run by undergraduate students and is open to all students from freshman to senior levels. We are committed to bringing real-world experience to students as they learn to solve complex problems and build connections between science, technology, engineering, art, and mathematics. We hope to provide a safe and fun environment for the development of autonomous systems to foment high-level thinkers concerned with social and environmental issues.
