

We are students at Georgia Tech who are interested in robots and boats! Our team consists of mainly undergraduate students, but we have one graduate student advisor. The team is a mix of different engineering majors including aerospace, electrical, mechanical, and computer science. This year's sub builds off our fresh design revealed at last year's competition, and is using an entirely new software stack from our previous years. We are excited to show the fruits of our labor at this year's competition and can't wait to kick some Robobutt! (Hopefully not our own...)
