

We build underwater autonomous robots! The Underwater Robotics Club is student run and always open to new members from any major. Anyone who is passionate about robots is welcome to [join us](#). The team works outside of the classroom to improve each other's technical skills and to spread the passion of robotics throughout the community. We take our robot, Seawolf, to outreach events such as teaching elementary school students how they can get involved in robotics at an early age. Ultimately, Seawolf competes in the [RoboSub Competition](#) annually in San Diego.
