

Beginning in 2016, Oregon Tech Unmanned Systems (OTUS) club has been a participating team in Robonation's Robosub Competition. Oregon Institute of Technology's (OIT) contending team for Robosub 2018 consists of 2 main sub-teams, mechanical and software. The mechanical team is led by Kai Hattan as Club President, and features senior project members Trenton Fender and Brenston Kinoshita. Our software team is headed by Peter Stine as Club Vice-President with additional club members Jason Farell and Issara Sucharitakul. All team members are undergraduates at OIT, aside from mechanical engineering department faculty member Dr. Dongbin Lee as acting Club Advisor. OTUS presents two returning members, Kai since 2016 and Peter since 2017. Despite having a recently established engineering body, OTUS maintains its momentum in recruiting underclassmen to maximize the number of future returning members, such as Jason and Issara.
