

Team Bio:

San Diego Robotics 101 is a highly interdisciplinary team composed of both high school and college students from multiple universities, cities and countries. Using our experiences from the past few years, we have continued to refine our unique design, increasing its mission capabilities. This year, we took greater advantage of our cube design's adaptability, including the addition of a mini-sub. We also introduced upgraded electronics, improved navigation algorithms, and implemented more powerful thrusters to our robot. We look forward to pushing our design even further and exploring the possibilities created by it.
