

The Autonomous Underwater Vehicle Design Team of the University of Southern California (AUV of USC) is a student-run organization dedicated to the applications and advancement of underwater robotics technologies. Having spent the last year and a half building an entirely new submarine, we are very excited to be returning to the RoboSub competition. We are looking forward to getting our sub in the pool, but are also eager to learn about the multitude of techniques and technologies as we gear up for another sub build in the coming year.
