

UMBC Robosub Team Bio

We are UMBC Robosub, a subteam in the Retriever Robotics Club, who are building the autonomous underwater systems of the future, today. To fit the multi-disciplinary nature of the project, our team is composed of undergraduates and researchers from the Mechanical, Computer, and Electrical Engineering fields as well as from Computer Science. The system is manufactured entirely in-house and will be able to achieve complete autonomy in a multitude of challenging environments.
