

Our team is named PWr Diving Crew. We are a group of students from Wrocław University of Science and Technology who are affiliated in Science Club of Robotics – “Robocik”. Our University is one of the biggest technical colleges in Poland.

PWr Diving Crew is divided into technical and marketing departments. In turn, the technical department consists of the mechanics team, electronics team and software team. Over each team, care is provided by a separate leader, who is subject to the technical leader of the entire project. The high level of advancement of our robot requires specialist knowledge from many fields. That is why in our team there are people from different faculties, mainly from the Faculty of Mechanics Engineering and Faculty of Computer Science and Management. The technical department is supported by the marketing department, which collects funds for the development of the project, and also takes care of its appropriate promotion.

We do not think only about the current year, but we also want to ensure the continuity of our project. That is why we have people of different ages (both from the first and the last years of studies). Our main thought is to develop underwater technologies in Poland. RoboSub is first big event where we are present – so as the saying goes in our country – first cats behind the fences (we will explain it in the San Diego).
